## **DETAILED ACTION**

### ***Allowable Subject Matter***

Claims 1-5, 8, and 18-30 are allowed.

The following is an examiner's statement of reasons for allowance: referring to claims 1-5, 8, 18-20, and 29-30, the prior art's references of record do not disclose that the rotor performs repetitive rotational movement within an angular range of less than 360 degrees having its endpoints defined by a first angular position and a second angular position after energizing the coil, in which the rotor is held in either the first angular position or the second angular position by a magnetic detent torque when the coil is de-energized of  $T_{rate}/4 < T_d < 3 \cdot T_{rate}/4$ , in which  $T_{rate}$  denotes a minimum torque value in Nm when a rated current is passed, and  $T_d$  denotes a minimum torque value in Nm when a coil is in a de-energizing mode. This range provides a repetitive motion range to the actuator, which maintains it in a given direction in a de-energized mode. This avoids an energizing holding mode, in which current is continued to flow through a coil, which saves energy.

Referring to claims 21-28, the prior art's references of record do not disclose that either magnetic pole of the magnet is axially cut to forcibly destroy magnetic balance between the magnetic poles, thus increasing the amount of repetitive motion range of the rotor.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
